Distance Learning Plan - SB215 (2021)

Per Senate Bill 215, schools are required to have a plan in place to make technology available to all students and teachers involved in an emergency program of distance education. Strong Start Academy is currently a 1:1 technology school. Meaning, each enrolled student is assigned an electronic device in order to access the internet, digital course materials, and digital learning resources. Additionally, each teacher is provided with a laptop and an iPad to facilitate digital learning in the classroom. In the event that Strong Start Academy must implement an emergency program for distance education, there would be no additional cost to the school, as all students and staff are already equipped with the necessary technology to engage in remote learning from home.
